

About Us

OSOP is a team of international experts in hardware and software development.

We develop and support instrumentation and software for your early warning civil defense systems.

We envision a world of cheap, ubiquitous seismic sensors, fully automated local monitoring systems, and tightly integrated hardware and software solutions. In our world, your seismic observatory or civil defense office is connected to the public through social media and information is disseminated effortlessly.

Strong Motion *Network*

Introducing Darien, a strong motion accelerometer plus seismometer. Darien maps the destruction in real time, providing you with a first line of defense: accurate real-time information when you need it the most. And it fits in the palm of your hand!

Simplicity now comes standard. Darien's plug-and-go design makes installation easy.

Applications

- Civil Defense
- Strong Motion Earthquake Monitoring
- Local Seismic Monitoring
- Structural Monitoring
- Shake & Instrumental Intensity Maps

A Turn-Key *Solution*

Darien is more than just a seismic sensor. It is EVERYTHING:

Hardware Elements

- 50+ Strong Motion Sensors
- 50+ Weak Motion Sensors
- Rack Server
- NTP Time Server

Software Elements

- Automated seismic processing software
- Strong motion mapping software
- ShakeMap

Human Elements

- Beautiful Graphical User Interfaces
- SMS, Email, Facebook and Twitter Notifications
- Technical Support

How hard did it shake?

Darien answers this question in a way civil defense personnel and the public can understand.

Is Darien for you?

Darien has been developed for the rapid-response civil defense community. Its strong and weak motion sensors will benefit Universities, seismic observatories and civil defense offices alike.

Low Cost!

50 sensors, a server and all the software pre-configured and sending alerts - all for less than the price of 2 broad band installations. Get a free quote today, email us at sales@osop.com.pa.
