

SeiScreen

**seismic
observatory
in a BOX**

Introducing your seismic cloud service

We provide a fail-safe backup to established monitoring institutions and a practical alternative to costly local monitoring teams.

SeiScreen connects to OSOP's state-of-the-art earthquake monitoring system to display real-time, automated global earthquake information. Earthquake locations and magnitudes are transmitted across a low-bandwidth fail-safe connection from OSOP's independent and redundant international servers.

Event location and magnitude are displayed in map view.
