

Why Choose **Us?**

By providing your seismic observatory or civil defense office with the geophysical software and hardware to mitigate the effects of natural disasters, we advance our cause.

At OSOP we do it too. By actively maintaining a state-of-the-art seismic observatory and weak and strong motion networks of our own design, we satisfy our passion for seismology while preparing ourselves to better understand your needs.

About Us

OSOP is a team of international experts in hardware and software development.

We develop and support instrumentation and software for your early warning civil defense systems.

We envision a world of cheap, ubiquitous seismic sensors, fully automated local monitoring systems, and tightly integrated hardware and software solutions. In our world, your seismic observatory or civil defense office is connected to the public through social media and information is disseminated effortlessly.

OSOP tailors hardware and software solutions to your needs.

Selected Products

Darien Strong Motion Systems

The public wants to know one thing: How hard did it shake? Darien's local, neighborhood by neighborhood strong motion maps display where it shook the hardest in real-time.

Seismic Monitoring Solutions

Automated, Real-time and Turn-key Earthquake and Tsunami Monitoring Solutions (Earthworm, Earlybird, SeisComP, TOAST, ...)

Rapid Seismic Notification Systems

Immediate, real-time notifications of local & regional earthquakes and tsunamis. Processed automatically & sent to you by your phone, email, Twitter and Facebook accounts.
